

HIDDEN DANGER

There are over 4,000 chemicals in cigarettes and cigarette smoke.

AMMONIA

It helps you to absorb more nicotine – keeping you hooked on smoking.

FORMALDEHYDE

It causes cancer, and can damage your lungs, skin and digestive system. Embalmers use it to preserve dead bodies.

LEAD

Exposure to lead is most dangerous for young and unborn children.

BENZOPYRENE

You'll find it in coal tar and cigarette smoke. It's one of the most potent cancer-causing chemicals in the world.

ARSENIC

This deadly poison makes your lips burn and your breath turn bad.

PROPYLENE GLYCOL (PART OF ANTIFREEZE)

It aids the delivery of nicotine – tobacco's addictive drug – to the brain.

These are some of the harmful chemicals smokers inhale.

METHOPRENE

A chemical used to get rid of fleas on your pets.

TURPENTINE

Turpentine is toxic. It is commonly used as a paint stripper or thinner.

ACETONE

It's one of the active ingredients in nail polish remover.

CADMIUM

It can cause damage to the liver, kidneys, and stays in the body for years.

BENZENE

This cancer-causing chemical is used to make everything from pesticides to detergent to gasoline.

BUTANE

Highly flammable, butane is one of the key components of gasoline.

When used as intended the non-tobacco products shown are safe.
The products shown contain chemicals found in cigarettes or cigarette smoke.
The products themselves are not added to cigarettes.
